Order from LC or SLA mi$1.80, ph$1.80 61-13221

Trans. of Vestnik Mashinostroyeniya (USSR) 1958, v. 38, no. 8, p. 27-29.

A V-belt type variable speed transmission developed at the Odessa Technological Institute is described which has a wider range of speed adjustment, within the same bulk, than known types. The basic design consists of a spur gear differential train wherein the two parallel input branches are V-belt driven from the same motor shaft. Each V-belt transmission has driven and driving pulleys of variable width. The two transmissions are adjusted by a handwheel through a screw mechanism. The adjustment is differential. Therefore, the output shaft of the differential gear train has a range of speed (Machinery--Machine Parts, TT, v. 5, no. 4) (over)

Experiments indicated that cracks begin to develop in bent concrete sections when stresses reach the critical strength in the longitudinal direction. The load which causes the appearance of cracks, in a single static distribution, is not a breaking load and the critical equilibrium is reached only after a significantly increased load is exerted. The difference between the conventional critical strength under excentric loads and in the axial elongation is determined (Materials, TT, v. 5, no. 4) (over)
